Build a Supply Chain Chatbot using Flowise

■ Flowise Cloud (flowiseai.com)

■ CSV + PDF provided

■ Public chatbot URL required

Build a RAG chatbot in Flowise that answers questions about a supplier network using the two data files provided. The chatbot must be deployed online with a publicly accessible URL.

File	Contents
supplier_performance_data.csv	2,000 purchase orders · 116 suppliers · 27 columns — OTD rate, defect rate, compliance score, risk level, disruption flags, PO value and more.
SupplyChain_Governance_Policy_v3.2.pdf	10-section supplier governance policy — tier thresholds, SLAs, penalties, audit rules, disruption response procedures.

1**Create a Flowise Cloud account**

Go to <https://flowiseai.com> and sign up for a free account.

2**Create a Document Store & Load the data**

In the Flowise dashboard navigate to **Document Stores** and create a new store. Load both provided files using the appropriate loaders. Configure a text splitter and an embeddings model of your choice. Upsert and record the chunk count for each file.

Experiment with at least **two different chunk configurations** and document the results in your README.

3**Build the Chatflow / Agent Flow**

In **Chatflows** create a new flow and connect your document store to an LLM of your choice.

4**Test with sample questions**

Open the chat panel and run all 5 questions below. Copy each answer verbatim into your README.

Sample Questions & Expected Answers

Validate your chatbot against these before submitting.

Q
1

Which Tier-3 suppliers have an active disruption flag, and what response level applies per policy?

AN
S

11 Tier-3 suppliers: Dravex Components India, Plataforma Metales SA, Maghreb Castworks, Helios Pack Greece, Cerromax Minería, Orinoco Pack SAPI, Quetzal Textiles, Sibertek Molding, Archipelago PCB Corp, Varna Electronics EAD, Deltaforge Vietnam. All are High Risk with an active flag → Level 3 Activate per Policy §9 (CPO escalation + alternate supplier at minimum 40% volume).

Q
2

Which suppliers qualify for the annual Volume Rebate Program and how many are there?

AN
S

19 suppliers qualify: Borealis Composites, Crestline Chemical Supply, Fenwick Alloy Solutions, Hanguk Circuit Works, Hokkaido Alloy Tech, Krauss-Polymex GmbH, Lakeshore Components, Lumivex Semiconductor NL, Maplewood Polymer Corp, Norbec Alloy Works, Nordloom Finland Oy, Orrentek Precision Mfg, Ostwind Composites AG, PrecisionForge Taiyuan, Solveig Eco Packaging, Straits Packaging Hub, Tasman Circuit Boards, Toreval Electronics, Valdoro Special Alloys. Criteria (Policy §4.2): Tier-1 + OTD ≥ 93% + Defect < 0.5% + Sustainability Score ≥ 85.

Q
3

Which region has the highest total PO value, and does it breach the concentration limit?

AN
S

EMEA at \$193,987,179.91 — approximately 48.5% of total spend (\$399,563,494.10). This breaches the 45% regional concentration cap (Policy §5.3), requiring a Diversification Plan within 60 days.

Q
4

Which suppliers are on Supplier Watch List (SWL) status and what does it restrict?

AN
S

11 suppliers (Compliance Score < 60): Deltaforge Vietnam, Maghreb Castworks, Helios Pack Greece, Cerromax Minería, Orinoco Pack SAPI, Varna Electronics EAD, Quetzal Textiles, Plataforma Metales SA, Archipelago PCB Corp, Dravex Components India, Sibertek Molding. SWL restricts new PO issuance to 20% of prior quarter volume (Policy §3.4).

Q
5

Which product category has the highest average defect rate and does it exceed the Tier-2 limit?

AN
S

Mechanical Components — average 2.12% across 360 POs. Below the Tier-2 ceiling of 2.50% (Policy §3.2), so no breach — but approaching the limit.

5

Publish via Share Chatbot

On the Chatflow canvas click the **Share** icon (top-right toolbar). Go to the **Share Chatbot** tab. Toggle **Make Public** → **ON**. Copy the public URL:

```
https://cloud.flowiseai.com/chatbot/[your-chatbot-id]
```

Set Title to **SCM Assistant** and add a welcome message. Verify the link works in an incognito browser tab.

■ Do not delete the chatflow or disable Make Public before evaluation — the link will return a 403 error.

6

Export Chatflow JSON

On the canvas click the **Settings** icon → **Export Chatflow**. Save as **scm_assistant.json**.

7

Submit via GitHub

Create a public GitHub repository named **scm-assistant-bot** and push:

- ✓ **scm_assistant.json** — exported Flowise chatflow
- ✓ **/screenshots/** — screenshots from each step
- ✓ **README.md** — public chatbot URL · LLM and embeddings used · two chunk configs tried · all 5 Q&A answers verbatim · what you'd improve
- ✓ **.gitignore** — must exclude .env and any API key files

■ Never commit API keys. Email the GitHub link + chatbot URL to your Trinamix hiring contact.
